## Impression from visit note 1/6/2021 Kara Antoinak APRN

## Impression

Luke is a 22 yo male with a history of mood and anxiety symptoms with episodes of psychotic symptoms periodically. Currently, he is experiencing paranoia and auditory hallucinations which are concerning. Given a maternal family history of schizophrenia in his maternal aunt as well as his psychiatric history, current report of symptoms is concerning. Symptoms have remitted mildly, though Luke continues to feel that they are reality based. The effect of his current medication is that he is about to be less reactive with his emotional stated and actions. Luke is expected to benefit from pharmacological management of his symptoms and will benefit from therapy with goal of management and acceptance. Prognosis is guarded based on severity and duration of symptoms, history

of symptoms, level of insight, good family support.
